

SNAPPS

Summarize

The student provides a brief, concise summary of history & findings.

Narrow Differential

The student presents 2-3 differentials for the case.

Analyze Differential

The student analyzes differentials by comparing contrasting positive and negative data for each differential choice and then determines the most likely diagnosis. The preceptor can asses students' clinical reasoning during this session.

Probe Preceptor

The student uses the preceptor as a knowledge resource and questions about uncertainties. Reviews possible alternative approaches with the preceptor. The student can prompt the preceptor to give clinical pearls.

Plan Management

The student discusses a management plan and/or next steps with the preceptor.

Select Case-Directed Learning

The student self-identifies a learning need related to the case and later discusses findings with the preceptor
